

For over twenty-five years, we have partnered with top industry clients to unlock massive opportunities with data. We provide advanced data science and data engineering consulting with high-performance technology platforms leveraging Big Data and Cloud computing.

CORE COMPETENCIES

WE HELP CLIENTS

- Apply cutting edge analytics
- Generate data-driven insights
- Improve or streamline processes
- Efficiently integrate external data sources
- Develop applications to serve unique business needs

DIFFERENTIATORS

OUR ADVANTAGE

- Data scientists and engineers with expertise in data management and modeling
- Ongoing training and R&D to maintain the cutting edge of data science applications
- Bring cross-industry knowledge of newest and best practices to each engagement.

PAST PERFORMANCE

SAMPLE OF PAST PROJECTS

Created a scalable solution for a globally known bank to comply with regulations, reducing manual labor and increasing accuracy through automated code to run a process with a front-end UI for dashboard reporting and modification of rules.

Developed a data driven solution to help a fixed income sales desk identify potential counterparties more efficiently.

Provided enhanced insurance coverage insights and pricing inputs through the introduction of systematic Natural Language Processing on unstructured data.

Utilized data preparation procedures and predictive analytical models to provide the quantitative basis for a large scale medical provider fraud action plan.

Created a data-driven rating structure to standardize underwriting and increase pricing transparency with modeling and benchmarking, made available to teams via a customized UI.

Streamlined the ability for a major organization to identify exceptional managers through HR data integration, benchmarking, and modeling, which impacted compensation formulas, recruiting, and resource planning.
